Chapter 4: Community Profile

WYOMING COUNTY

INTRODUCTION

Wyoming County was formed on May 14, 1841 from land belonging to Genesee County. The county seat was established in the Town of Warsaw. The county's name is derived from a Delaware Indian term meaning "broad bottom lands." During the 1700s the Seneca Indians used the area for hunting, trapping and fishing, until in 1797 they relinquished their title over the land to speculator Robert Morris. Morris then sold the land to trustees of the Holland Land Company, a consortium of Dutch investors interested in developing frontier lands in North America. The Seneca withdrew to several small reservations within the company's vast 3.3 million acre tract, which was surveyed in the late 1790s by Joseph Ellicott (1760-1826), the company's chief surveyor and land sales agent.

Settlement in what is now Wyoming County got underway in 1802 following the completion of Ellicott's surveys. Under his able oversight, surveyors delineated a grid pattern of townships that remains visible on the county's landscape today. Many municipal boundaries and county roads follow the surveyor's grid laid out more than two centuries ago.

Given the area's remote and primitive condition, the Holland Land Company was forced to invest considerable resources in surveying, road building, advertising, and other measures to attract settlers to the area. Ellicott and his surveyors kept detailed notes on the area's topography, geology, plant and animal life, and soil conditions that were invaluable to later settlers. Ellicott took decisive steps to shape the pattern of settlement in the future county by surveying town lines, laying out key roadways, and attracting skilled workers such as millers, blacksmiths, innkeepers, and other artisans who frequently established the nucleus of future settlements. When Ellicott retired from his post in 1821 he had effectively laid the foundations of Wyoming County's future growth and development.

By the 1820s settlement in the future county was well underway. The earliest settlers, mostly from New England and eastern New York, established themselves in the towns of Attica, Middlebury, and Sheldon. However, due to the plentiful supply of cheap land, settlers rapidly spread throughout the area. By 1810 all of the future county's townships were inhabited and the population stood at 2,724 people. The next four decades witnessed steady population growth; by 1850 there were about 30,000 people in the county. This figure would remain remarkably consistent over the next hundred years.

In the 1850s the county's transportation network was enhanced by the construction of the Genesee Valley Canal and several railroad lines. The canal, running south through the Genesee Valley, linked the county's eastern townships with the Erie Canal in Rochester. An impressive engineering feat, the canal never proved commercially viable and was abandoned in 1878. Railroads, on the other hand, provided a key stimulus for the local economy. The first railway line, linking Attica to Rochester, was completed in 1842. During the following decades several new rail lines were built, including the Rochester and State Line and the Arcade and Attica.

During the early 1900s the county began a coordinated road construction and maintenance program. This program boosted the local economy by providing jobs for highway workers and offering farmers and manufacturers efficient transportation links to the outside world, thus stimulating both dairy farming and various manufacturing activities. Early industrial activities in the county included salt mining, textile manufacturing, and quarrying.

In the twentieth century Wyoming County retained its rural and agricultural roots. Its distance from large cities like Rochester and Buffalo meant that it was not affected by post World War II suburban spread over the landscape. Still, some villages including Warsaw and Attica have seen some minor suburban expansion outward from their historic cores. The county has been adversely affected by the closure of important manufacturing plants, and despite the ongoing importance of dairy farming and remaining industrial plants, many residents commute to work in places outside the county.

LOCATION AND LANDSCAPE FEATURES

Wyoming County is centrally located within western New York, immediately to the west of the Genesee River and about midway between Lake Ontario and the New York – Pennsylvania border. It is bounded on the north by Genesee County, on the east by Livingston County, on the south by Allegany and Cattaraugus Counties, and on the west by Erie County. The Genesee River makes up a segment of the county's southeastern boundary.

The county is roughly square in shape, extending over 601 square miles of land. The largest body of water within the county is Silver Lake, which lies mostly within the town of Castile, although the northernmost part of the lake borders the town and village of Perry. This little glacial lake is the only "Finger Lake" west of the Genesee River. Numerous smaller lakes, ponds, and creeks can be found throughout the county. The main watercourses include the Oatka, Tonawanda, Cayuga, Buffalo, Wiscoy and Cattaraugus Creeks. Generally, surface water drains outward from the center of the county. The county is part of the Cattaraugus Hills, a subregion of the Appalachian Upland.

Wyoming County's landscape is overwhelmingly rural. Farms and forested areas, interspersed with small hamlets and villages, dominate the landscape. The county's northern half features many pronounced hills and valleys, while the higher southern portion has a gentler, rolling topography. An 800 foot deep post-glacial canyon cut by the Genesee River, which runs along the southeastern border of the county, forms an impressive gorge that is known as the "Grand Canyon of the East" and forms the backbone of Letchworth State Park.

The rich agricultural lands found throughout the county are a result of the glaciation of the last ice age, which ended about 10,000 years ago. All of Wyoming County was covered by glaciers that brought glacial till from the north. The quality of this till varies from one area to the next, but the majority of it provides excellent farming soils.

The county's primeval forest included beech, sugar maple, hemlock, white pine, and basswood trees. Devonian shale, sandstone and siltstone make up the county's bedrock. Important natural geologic resources include salt and natural gas. Salt is present under the county except for the northwestern corner, while natural gas is found in large pockets in the western third of the county and the northeast corner.

A myriad of transportation routes exist within Wyoming County. No major expressways pass through the county, but a number of State roads (Routes 19, 19A, 20A, 39, 63, 77, 78, 98, 238, 246, 354 and 436) transverse the county. Two major railroads, Conrail and Rochester Southern, operate rail lines through the county. Lastly, the Perry-Warsaw Airport, located in the Town of Perry directly between the villages of Perry and Warsaw, serves small private and business aircraft.

CLIMATE

Wyoming County's climate is classified as humid-continental, with an average July temperature of 67F and an average January temperature of 20F. The average annual precipitation amount is 43 inches, 19 inches of which falls during the growing season. Annual snowfall usually ranges from 110 to 120 inches. These figures vary throughout the county, and are higher in the western portions of the county due to the effect of Lake Erie on weather patterns. Transportation problems and extensive municipal snow-removal operations are common in the winter months, especially in the county's western townships. This is due in large part to lake effect snow storms generated over Lake Erie.

LAND USE AND ECONOMIC DEVELOPMENT

A. Historic Profile

During the early 1800s the future county's primitive transportation system prevented the development of large scale agriculture and industry. Despite the presence of productive farm land, many early residents supported themselves through subsistence agriculture. The most reliable source of income for the earliest settlers was the sale of potash, a byproduct of the clearance of forests for farm fields. In addition to potash, grain production and sheep and cattle raising largely dominated the county's early economy.

Wyoming County's early industrial establishments consisted simply of sawmills and gristmills built by the first settlers to supply their immediate needs. Throughout the early and mid 1800s industrial activities in the county revolved around agricultural activities. By 1855 the county had 30 gristmills, 77 sawmills, 16 tanneries, several woolen mills that relied on locally produced wool, a handful of small foundries that produced farming equipment, and a paper mill.

As increased competition from the Midwest lowered the price of grain and falling wool prices made sheep farming less profitable, the dairy industry grew in importance. Dairy farming led to the construction of cheese and butter factories, which remained important local businesses well into the twentieth century.

The county's first major non-agricultural industry, salt production, did not develop until the 1880s. In 1878 salt beds were discovered near Warsaw. Solution mining techniques, which involved pumping water down to the salt strata to dissolve the salt and force it back to the surface as brine, were used to extract the mineral. By 1900 salt mines provided a major underpinning for the local economy. The Warsaw Salt Company, based in Warsaw, the Worcester Salt Company, based in Silver Springs, the Pearl Salt Company, based in Covington, and the Perry Salt Company, based in Perry, were the county's leading salt producers. In the early 1900s the salt mining industry declined in importance, although some salt works remain in operation in the early twenty-first century, such as the Morton Salt Company in Silver Springs.

Textile manufacturing replaced salt shortly after the turn of the twentieth century. Early textile plants located in Arcade, Perry, Warsaw, and the Village of Wyoming and attracted many Polish immigrants to the county. Arcade developed as the industrial "hub" of the county, producing an array of goods including yarn and textiles, automobile parts, and precision instruments. Local manufacturing struggled through the Great Depression but revived in the wartime economy of the 1940s. Textile plants produced uniforms and factories produced tools and equipment for the Armed Forces.

In 1931 the State Department of Correctional Services opened the Attica Correctional Facility, a maximum security prison that provided the area with an entirely new employment sector. The Attica Correctional Facility is perhaps the most well known prison in the United States after Alcatraz, due to the infamous 1971 prisoner uprising. In 1985 the State opened the Wyoming Correctional Facility, a medium

security prison, on a site adjacent to the older prison. In the early 21st century, the two prisons employed almost 1500 people.

In the 1950s, the construction of the New York State Thruway just a few miles north of Wyoming County and the accompanying reduction in freight train service to the county signaled a major shift in the county's economy. The closure of large manufacturing plants began in the late 1950s and continued through the 1990s. Arcade retains significant manufacturing businesses in the early twenty-first century, but has lost important plants including Motorola. Perry has suffered the loss of several important factories, including the Perry Knitting Company, the Robeson Cutlery Company, and Champion (textiles). Other important businesses to leave the county include Otis Elevator, which closed its Warsaw plant in 1966 and Westinghouse Castings, which closed its Attica plant in 1986.

However, despite these losses, the manufacturing sector was still responsible for 16.4% of Wyoming County's employment in 2000. Wyoming County's major manufacturing sector employers, as of 2003, are Prestolite Electric (600 employees, Arcade), American Precision Industries (255, Arcade), Archway Bakery (165, Perry) and Morton Salt (175, Silver Springs). In 2000 the fastest growing business in the county was Pioneer Credit Recovery (550, Perry and Arcade).

Despite the importance of these manufacturing plants, Wyoming County's key industry is agriculture, specifically dairy farming. The commercialization and mechanization of the farming industry has decreased number of farms and the acreage of land under cultivation during the late twentieth century. Wyoming County continues to be a major dairy farming area, as evidenced by the fact that the county has the most cattle and milk cows of any New York county. Wyoming County currently produces more milk than any other county in the state and ranks 20th out all counties in the United States. In additional to dairying, major crops include potatoes, wheat, corn, peas, beans, apples, berries and hay. Christmas trees and maple sugar are side products of many farms.

Tourism is a growing industry. Many tourists in the county come to see the beautiful scenery and breathtaking vistas at Letchworth State Park. Other unique tourist attractions in the county include train excursions on the Arcade & Attica Railroad and the historic Village of Wyoming, known as the "Gaslight Village" because of the natural gas streetlights still in use along its main thoroughfares.

B. Current County Development Trends

An overall analysis of development trends in Wyoming County was completed as part of the *Regional Development Analysis* (G/FLRPC, 2004). For this analysis, data from the *Regional Population Forecast: County, City, Town, and Village Projections for the Genesee/Finger Lakes Region* (G/FLRPC, 2003) were applied to the land available for development and zoning capacity figures to determine an estimated build out potential in residential, commercial, and industrial development categories.

Wyoming County municipalities have approximately 171,000 acres of land available for development. The projected number of available residential lots is between 71,000 and 136,000. Of these lots available for residential development, approximately 175 lots (between 0.1 and 0.3 percent) are projected to be developed by 2020. Approximately 200 (between 0.2 and 0.3 percent) are projected to be developed by 2040.

The allowable square footage for commercial development is approximately 15.5 million. Of allowable square footage for commercial development, between 29,000 and 186,000 (between 0.2 and 1.2 percent) is projected to be developed by 2020. Between 67,000 and 434,000 (0.4 and 2.8 percent) is projected by 2040.

The allowable square footage for industrial development is approximately 24.9 million. Of allowable square footage for industrial development, between 68,000 and 291,000 (between 0.3 and 1.2 percent) is projected to be developed by 2020. Between 158,000 and 679,000 (0.6 and 2.7 percent) is projected by 2040.

As these figures indicate, although there is plenty of undeveloped land in Wyoming County there is little demand for new construction. The county's low population growth makes it highly unlikely that major new development will occur in Wyoming County over the next forty years.

The following table indicates, by municipality, where the major growth areas in the county are and what basic type of development (residential, industrial, and commercial) is currently occurring.

Department, 2005 - 2006

C. Current Municipal Development Trends

At each Regional meeting, municipal officials were asked to map the anticipated location of any new development they expect to occur over the next 10 to 20 years. The officials were asked to map areas of new development that were *not* infill development. Overall, very little new development is expected in Wyoming County. The summary of their comments follows.

Town of Arcade

The Town of Arcade anticipates potential industrial development along Route 98 to the southeast of the village.

Village of Arcade

The Village of Arcade anticipates potential industrial development along Route 98 in the northeast corner of the village.

Town of Attica

The Town of Attica does not anticipate any major new development.

Village of Attica

The Village of Attica does not anticipate any major new development.

Town of Bennington

The Town of Bennington anticipates some new low-intensity residential development in the westernmost area of the town, due to the ongoing expansion of the greater Buffalo metropolitan area.

Town of Castile

The Town of Castile does not anticipate any major new development.

Village of Castile

The Village of Castile does not anticipate any major new development.

Town of Covington

The Town of Covington does not anticipate any major new development.

Town of Eagle

The Town of Eagle does not anticipate any major new development.

Town of Gainesville

The Town of Gainesville does not anticipate any major new development.

Village of Gainesville

The Village of Gainesville does not anticipate any major new development.

Town of Genesee Falls

The Town of Genesee Falls does not anticipate any major new development.

Town of Java

The Town of Java does not anticipate any major new development.

Town of Middlebury

The Town of Middlebury does not anticipate any major new development.

Town of Orangeville

The Town of Orangeville does not anticipate any major new development.

Town of Perry

The Town of Perry expects new development to occur near the village along Simmons Road and Rt. 246.

Village of Perry

The Village of Perry does not anticipate any major new development.

Town of Pike

The Town of Pike does not anticipate any major new development.

Village of Pike

The Village of Pike does not anticipate any major new development.

Town of Sheldon

The Town of Sheldon does not anticipate any major new development.

Village of Silver Springs

The Town of Silver Springs does not anticipate any major new development.

Town of Warsaw

The Town of Warsaw expects new commercial development along Route 19, extending from the village line north to the intersection with Saltvale Road.

Village of Warsaw

The Village of Warsaw does not anticipate any major new development.

Town of Wethersfield

The Town of Wethersfield does not anticipate any major new development.

Village of Wyoming

The Village of Wyoming does not anticipate any major new development.

Please refer to Map 7, Possible Future Development Areas, at the end of this Chapter. This map is based on the input of County and municipal officials and provides, in graphic form, the information presented in the above list. This map indicates that local officials do not see significant new development occurring outside limited areas in the vicinity of the Villages of Arcade and Warsaw, as well as in the Town of Bennington which is seeing new rural residential growth as a result of the continuing spread of the Greater Buffalo area.

The periodic revision of municipal land use plans and regulations will help ensure that any new development that does occur in the County will be located outside of recognized hazard areas. Appendix A, *Wyoming County Local Law Assessment*, provides a "gap analysis" for municipal officials to use when updating their local laws. By identifying the "gaps" in local plans, studies, and regulations regarding hazard mitigation practices, this assessment offers a resource for local officials to use in guiding new development into safe areas.

POPULATION TRENDS AND DEMOGRAPICS

Population growth in Wyoming County has been gradual but steady over the past forty years. For a century, from 1850 to 1950, the county's population remained fairly consistent, at about 30,000 people. In the 1950s there was a slight increase, and the population has continued to grow since then. However, the county's population is expected to peak in 2010 and then decline slightly over the next thirty years.

Population	Historic Population					Change 200					n
	1960	1970	1980	1990	2000	Number	%	2010	2020	2030	2040

Table 4.2: Historic Population Figures and Projections by Municipality,
Wyoming County, New York

Source: Regional Population Forecasts: County, City, Town and Village Projections for the Genesee/Finger Lakes Region out to the year 2040, Genesee/Finger Lakes Regional Planning Council, December 2003.

A readily apparent trend is the declining population in five of the county's nine villages. The villages of Attica, Castile, Gainesville, Wyoming, and Perry have lost population over the last forty years. Perry lost 17%, Gainesville 18%, and Castile 22%. Population loss in Attica stood at 10% while Wyoming lost a mere 2%; however, it is also important to note that even those villages that gained population did so at much lower rates and amounts than most of the towns. For instance, the Village of Arcade grew by only 5%, or 96 people, between 1960 and 2000. However, the Town of Arcade grew by 123%, or 1,227 people, over that same time period.

Of the 14,906 households in Wyoming County, 71.9% are family households. 34.2% of these households have children under the age of 18 living with them, 58.3% are married couples living together, and 9.2% have a female householder with no husband. 28.1% of all households are non-family households. 23.1% of all households have only one householder, and 10.2% of all households have a householder who is 65 years old or older. The average household size in the county is 2.62 people and the average family size is 3.08 people.

The racial makeup of the county's population is 93.1% white, 5.9% black, 0.5% Asian, 0.3% Native American, and 0.2% two or more races. The age distribution of the county's population is 26.6% under the age of 19, 38.4% between the ages of 20 and 44, 22.8% between the ages of 45 and 64, and 12.2% are 65 years of age and older. The median age of a county resident is 36.7 years.

OVERVIEW

Government: Wyoming County is governed by a Board of Supervisors. The Board has sixteen members, one representing each town. Each Board member's voting power is based on the population of the town he/she represents. One member serves as presiding Chairman; the Chairman is the county's chief administrative official. The county includes twenty-five administrative units comprising sixteen towns and nine villages, and the county seat is located in the Village of Warsaw.

Towns (16): Arcade, Attica, Bennington, Castile, Covington, Eagle, Gainesville, Genesee Falls, Java, Middlebury, Orangeville, Perry, Pike, Sheldon, Warsaw, Wethersfield.

Villages (9): Arcade, Attica, Castile, Gainesville, Perry, Pike, Silver Springs, Warsaw, Wyoming.

Police Departments (6): Arcade Police Department, Attica Police Department, Perry Police Department, Warsaw Police Department, Wyoming County Sheriff, New York State Police.

Fire Departments (19): Arcade Fire Department, Attica Fire Department, Bennington Fire Department, Castile Fire Department, Cowlesville Fire Department, Eagle Fire Department, Gainesville Fire Department, Genesee Falls Fire Department, Harris Corners Fire Department, North Java Fire

Department, Perry Center Fire Department, Perry Fire Department, Pike Fire Department, Sheldon Fire Department, Silver Springs Fire Department, Strykersville Fire Department, Varysburg Fire Department, Warsaw Fire Department, Wyoming Fire Department.

Ambulance (19): Arcade Fire and Rescue Squad, Attica Fire Department, Bennington Fire and Rescue Squad, Bliss Rescue Squad, Castile Fire and Rescue Squad, Cowlesville Fire Company, Gainesville Fire Department, Genesee Falls Fire and Rescue Squad, Harris Corners Fire Department Rescue Squad, Monroe Ambulance, North Java Rescue Squad, Perry Emergency Ambulance Squad, Pike Rescue Squad, Sheldon Fire and Rescue Squad, Silver Springs Fire and Rescue Squad, Strykersville Fire and Rescue Squad, Varysburg Fire and Rescue Squad, Warsaw Fire and Rescue Squad, Wyoming Hook & Ladder Company.

School Districts (12): Attica Central School District, Letchworth Central School District, Perry Central School District, Warsaw Central School District, Wyoming Central School District, Yorkshire – Pioneer Central School District, *Alden Central School District, *Alexander Central School District, *Fillmore Central School District, *Holland Central School District, *Pavilion Central School District, *Keshequa Central School District.

*denotes a school district based outside Wyoming County that serves students in the county.

Electric Companies (3): New York State Electric & Gas Corporation (NYSEG), Rochester Gas & Electric (RG&E), Niagara Mohawk.

Natural Gas Companies (3): New York State Electric & Gas Corporation (NYSEG), Rochester Gas & Electric (RG&E), National Fuel Gas.

Telecommunications Companies (2): Verizon New York, Inc., Frontier Telephone of Rochester.

	Wyoming County, New York
Town of Arcade	Zip Code: 14030
Town of Arcade COMMUNITY DESCRIPTION Location/Boundaries: The Town of Arcade lies within the southwest portion of Wyoming County. State highways 39 and 98 intersect in the Village center. Dates of Settlement and Incorporation: Arcade was first settled in 1807. In 1818 the town was incorporated from Sheldon by the name of China. The name was changed to Arcade in 1866. Notable Facts: The Town of Arcade was formed from Sheldon in 1818 as China. In 1866 the name was changed to Arcade. Wool mills were the earliest manufacturing in Arcade. All different types of manufacturing took place throughout the 20 th century, knit goods, bowling pins, hydraulic jacks and precision instruments, to name a few. Agriculture also plays an important role. Most farming centers on dairying, potatoes and hay. Pioneer Credit, a subsidiary of Sallie May, is one of Arcade's largest employers. LANDSCAPE FEATURES Topography: Rolling and hilly upland Hydrography: Cattaraugus Creek, Clear Creek Watersheds: The Town of Arcade lies almost entirely within the Upper Cattaraugus Creek watershed. However, the northwest corner is part of the Buffalo Creek watershed and a slight bit of the Wiscoy Creek watershed permeates the southeastern boundary of the town. AREA Square Miles: 47.1 Acres: 30,144 POPULATION TRENDS Between 1980 and 2000, the population of the Town of Arcade increased by 26.7% from 3,714 to 4,184. It is projected that Arcade will grow another 4.1% in the next forty years.
